- HTML5
- RESTful APIs
- MongoDB
- Express.js
- Node.js
- Git
- Redux
- React
- JavaScript
- Koa.js
- MySQL
- GraphQL
- PostgreSQL

INTERESTS

- Travelling
- Dancing
- Cooking
- Book Reading

PROFESSIONAL SUMMARY

Dynamic Full Stack Web Developer with expertise in the MERN stack leveraging React.js for robust frontend and Node.js for efficient server-side API development. Skilled in leveraging Generative AI for innovation and quick adoption of new tech stacks. Strong problem-solving and collaboration capabilities.

WORK EXPERIENCE

Hyperthink Systems

Software Engineer | June 2024–present

- Designed and maintained RESTful APIs for efficient communication between frontend and backend, ensuring secure user sessions and optimal server performance.
- Collaborated with frontend and mobile teams for API integration, applying security best practices, and writing tests for backend services, catering to various business logic requirements.

PROJECTS

LuxeFemme | 🌐 |

React | Node.js | MongoDB | Express.js | Responsive Web Design

- Leveraged the MERN stack to build a comprehensive e-commerce platform for fashion and beauty products.
- Designed a fully responsive interface utilizing Chakra UI, aimed at easy navigation and a modern aesthetic.
- Developed key features including a product catalog, shopping cart, and secure payment options to meet customer needs.

Digital Incubation Center (DIC)

JavaScript | Node.js | Express.js | RESTful APIs | Responsive Web Design | MySQL

- Developed server-side APIs using Node.js and Express.js to handle client requests efficiently.
- Designed and implemented database models and queries using MySQL to manage application data.
- Built responsive web design components ensuring the application renders correctly on various devices.
- Ensured seamless integration between frontend and backend through RESTful APIs.
- Conducted comprehensive testing and debugging to resolve issues and enhance application reliability.
